

Zupurb — Project Executive Summary

Version: 1.0 · **Date:** 2026-06-22 · **Audience:** stakeholders / investors / partners

1. What Zupurb is

Zupurb is a **location-based social discovery and loyalty platform** for dining, nightlife, and entertainment. It combines **trustworthy, verified reviews** with **personalized recommendations, reservations, deals & rewards**, and a growing **partner ecosystem** — so consumers discover the right places and experiences for *them*, and businesses reach and retain the right customers.

Its differentiator is **trust + personalization**: reviews tied to verified visits, an anti-fraud scoring layer, and a **"People Like You"** rating that shows how a venue scores among users with a similar taste profile — not just a generic star average.

2. Platform at a glance

Component	Audience	Tech	Status
Consumer app	Diners / go-ers	Flutter (iOS, Android, Web)	Demo works end-to-end; core flows live, several in active development
Restaurant Owner Portal	Venue owners	Next.js (web)	✅ Live
Partner apps (Entertainer, Vendor, Brand)	Supply-side partners	Next.js (web)	Planned (separate app per role)
Creator program	Influencers	In the consumer app	Planned
Cloud backend	—	Firebase (Firestore, Cloud Functions, Storage, Auth, Messaging, App Check)	✅ Live

3. Key features

Discovery & Explore

- Instagram-style Explore with **persona lenses** (Foodie, Nightlife, Traveler...), taste rails, and a post feed
- Venue, entertainer, vendor, and brand discovery; **maps & "near me"**; menu photos; search & filters

Reviews & trust

- **Verified-visit** reviews (receipt-backed), structured scoring, and an anti-fraud / user-reputation layer
- **"People Like You"** rating (per taste-cohort), AI review summaries, sponsorship **disclosure**, content moderation

Reservations

- Time-slot booking, reservation passes / QR check-in, "my reservations"

Deals, rewards & loyalty

- **Points** economy, **badges & challenges**, **loyalty tiers** (Bronze→...)
- Redeemable **deals** and **gift-card** rewards; **Zupurb Plus** subscription tier

Social & content

- Profiles, posts/feed, **Creators**, follow, and in-app **messaging/chat**

Onboarding & personalization

- Multi-step onboarding that captures a **taste profile** (interests, cuisines, demographics) powering recommendations and "People Like You"

Owner Portal (live)

- Dashboard & analytics, **deals** management, **reviews + responses**, **reservations** management, establishment profile, **announcements** to followers, **QR check-in**

Account, privacy & compliance

- Email + social sign-in, **account deletion** (with anonymization), GDPR data export, ATT consent, accessibility (WCAG-oriented)

4. Partner ecosystem (roadmap)

Beyond venue owners, the supply side is already modeled and will get self-service interfaces, **one role at a time**, on the shared backend:

Role	Interface	Core capability
Entertainer	<code>zupurb_entertainer</code> (web)	Profile, availability, real bookings, messaging
Service Vendor	<code>zupurb_vendor</code> (web)	Profile, service packages, inquiries & quotes
Brand / Sponsor	<code>zupurb_brand</code> (web)	Offers/deals, sponsored placement, redemptions
Influencer / Creator	In-app	Creator program, verified badge, analytics, disclosure

(Detailed in `PARTNER_ROLES_PLAN` , `PARTNER_ROLES_SOW` , `PARTNER_ROLES_SPEC` .)

5. Technology & integrations

- **Foundation:** Firebase / Google Cloud (auth, database, serverless logic, storage, push, analytics, crash reporting) — already operational.

- **To activate at launch/scale:** Apple Developer & Google Play, Google Maps, SendGrid (email), a receipt-scanning vendor, RevenueCat (subscriptions), Tremendous (gift cards), Algolia (search), AWS Rekognition (image moderation), Branch (referrals), plus optional trust/ops services. (Full list in `THIRD_PARTY_SERVICES.md`.)

6. Current status (honest snapshot)

-  **Consumer app runs end-to-end** as a demo: reads live data across Explore, venues, reviews, deals, profile, points; onboarding persists a taste profile; account deletion calls the backend.
-  **Owner Portal is live** with real management flows.
-  **In active development:** several consumer **write/interaction flows** (submit review, create reservation, redeem, follow/favorites, chat send) and the **paid tier** (needs RevenueCat products); some screens still render mock data.
-  **Not yet store-published** — pending developer accounts + launch third-party keys.
-  **Key dependency:** deploy access to the live Firebase project (`zupurb-9580f`) is currently limited and needs resolving to ship backend changes.

7. Roadmap (near-term)

1. **Resolve backend deploy access** + finish wiring core write flows (reviews, reservations, redemption).
 2. **Partner Phase A** — shared backend foundation (roles, claims, bookings), then the **Entertainer** app, then Vendor, Brand, and the in-app Creator program.
 3. **Launch readiness** — provision store & third-party accounts, wire the paid tier, submit to the App Store & Google Play.
